Brandberry Lite

A short guide to install the theme, customize it, and import the free demo.

1. Install the theme

In WordPress go to Appearance - Themes - Add Theme and upload the Brandberry Lite zip, or copy the brandberry-lite folder into wp-content/themes/. Activate Brandberry Lite. On a fresh site you will see the native homepage preview until you import the demo.

2. Recommended plugin

Elementor is optional for a simple site. Install it from WordPress.org if you want the starter demo. Open Appearance - Brandberry Lite and use Install plugins if Elementor is not active yet.

3. Import the free demo

Go to Appearance - Brandberry Lite and click Browse demos. On the Brandberry Lite card, click Import. The demo package ships with the Brandberry Starter companion plugin, not inside the theme zip.

4. Customize the theme

Go to Appearance - Customize - Brandberry Lite for colors, typography, header, menu, blog, and footer.

5. Brandberry Pro

Pro unlocks the full demo library, the AI website builder, and advanced theme settings. https://treethemes.com/
