SOLUTIONS LTD.

About Us

Proactive cybersecurity partner, trusted globally, moving at the speed of modern threats with 24/7 expert support and certified solutions.

Cyenetic Solutions Ltd. is a trusted global cybersecurity partner delivering proactive penetration testing and security consultation. We serve over 50 organizations across finance, healthcare, and government, providing tailored solutions to unique industry challenges. Our expert team combines proven methodologies with 24/7 support to identify critical vulnerabilities and deliver clear, actionable guidance, helping you strengthen your defences and protect your most valuable digital assets.

Vision & Mission

→ Vision

To be the kinetic force in cybersecurity, where our proactive, ever-moving security solutions empower organizations to operate without fear, creating a resilient digital world that thrives on innovation.

→ Mission

We deliver security in motion. As your kinetic cybersecurity partner, we move proactively to outpace modern threats, protecting the digital assets of over 50 organizations worldwide. Through expert penetration testing, tailored consultation, and 24/7 vigilant support, we embed dynamic defence into your operations. Our mission is to translate complex risks into clear, actionable strategies, transforming your security posture from a static barrier into a resilient, adaptive force. We empower you to innovate and grow with speed, confidence, and unshakeable resilience.

CYENETIC SOLUTIONS LTD.

Our Core Values

Integrity

We operate with unwavering honesty and transparency, building trust by delivering on every promise and providing objective, dependable security guidance.

Innovation

We proactively adapt and leverage cutting-edge methodologies, ensuring defences evolve faster than the threats they are designed to stop.

Commitment

We are dedicated 24/7 partners, demonstrating an unwavering promise to safeguard your assets and ensure your long-term operational resilience.

Collaboration

Security is a shared mission. We work as one with your team, combining expertise to build stronger, customized defence strategies.

Our Services

Web Application Penetration Testing

Objective

Identify and exploit security vulnerabilities in your web applications before attackers can.

Our Kinetic Approach

Basic: Comprehensive scanning for OWASP Top 10 vulnerabilities with a clear report.

Pro: Adds expert-led manual testing, business logic flaw analysis, and detailed exploitation reporting.

Enterprise: Includes security architecture review, remediation verification, and custom SLAs.

Deliverable

An actionable report with prioritized findings and step-by-step guidance to secure your applications.

Our Services

Mobile Application Penetration Testing

Objective

Proactively uncover and validate security weaknesses in your Android applications to prevent data breaches and ensure robust protection for your mobile ecosystem.

Our Kinetic Approach

Basic: Automated and manual assessment focusing on the OWASP Mobile Top 10 risks, insecure data storage, and improper platform usage, delivered with a clear report.

Pro: Adds expert-led, interactive testing for complex business logic flaws, client-side injection attacks, and reverse engineering analysis to assess tamper resistance.

Enterprise: Comprehensive testing suite including remediation verification, assessment of connected backend API security, and a review of the security architecture for the entire mobile deployment model.

Deliverable

A prioritized, actionable report detailing exploited vulnerabilities, evidence of impact, and clear remediation steps to harden your application against real-world attacks.

Our Services

API Penetration Testing

Objective

Secure the critical data pathways of your modern applications by identifying and exploiting vulnerabilities in your Application Programming Interfaces (APIs) before they can be leveraged in an attack.

Our Kinetic Approach

Basic: Comprehensive assessment targeting the OWASP API Security Top 10, covering broken authentication, excessive data exposure, and security misconfigurations.

Pro: Adds expert-led manual testing for complex business logic flaws, improper asset management, and deep fuzzing of API endpoints to uncover hidden vulnerabilities.

Enterprise: Includes full remediation verification, a review of the overarching API security architecture, and testing of rate limiting and DDoS resilience measures.

Deliverable

A detailed, actionable report that maps vulnerabilities to specific endpoints, provides proof-of-concept exploits, and offers clear guidance for developers to remediate risks.

CYENETIC
SOLUTIONS LTD.

Our Services

External Network Penetration Testing

Objective

Identify exploitable weaknesses in your organization's publicly facing network perimeter—such as firewalls, servers, and network devices—to prevent unauthorized external access.

Our Kinetic Approach

Basic: Methodical reconnaissance and scanning to discover exposed services, open ports, and known vulnerabilities on internet-facing assets.

Pro: Adds credentialed testing, expert-led manual exploitation of discovered flaws, and simulated attacker pivot techniques to assess potential internal impact.

Enterprise: Comprehensive testing including remediation verification, review of perimeter security architecture (e.g., WAF, NIDS rules), and advanced evasion technique testing.

Deliverable

A strategic report detailing the attack paths into your network, evidence of compromised systems, and prioritized recommendations to strengthen your external defence posture.

CYENETIC
SOLUTIONS LTD.

Our Services

Source Code Audit

Objective

Proactively identify and eliminate security vulnerabilities at the source—your application's code—to prevent flaws from ever reaching production and reduce long-term risk.

Our Kinetic Approach

Manual Expert Review: In-depth analysis for business logic flaws, authentication bypasses, and insecure data flows.

SAST Tool Analysis: Automated scanning to identify common vulnerability patterns and insecure functions.

Compliance & Best Practices: Verification against standards like OWASP Top 10 and CERT secure coding guidelines.

Deliverable

A comprehensive, developer-friendly report that pinpoints vulnerable code sections, explains the security risk in context, and provides direct code-level fixes and secure coding recommendations.

CYENETIC
SOLUTIONS LTD.

Our Services

Infrastructure Configuration Review

Objective

Ensure your core security infrastructure—including firewalls, WAFs, servers, and cloud platforms—is configured to enforce a strong security posture, not inadvertently create weaknesses.

Our Kinetic Approach

Architecture & Rule Analysis: Review of firewall, WAF, IDS/IPS, and cloud security group rules for flaws and excessive permissions.

Hardening Benchmarking: Assessment of server and network device configurations against CIS Benchmarks or custom baselines.

Attack Path Validation: Simulation of attacks to test if configurations effectively block real threats as intended.

Deliverable

A prioritized action plan detailing misconfigurations, their associated risks, and specific, step-by-step instructions to harden your environment and optimize security controls.

CYENETIC
SOLUTIONS LTD.

Our Services

WordPress Malware Investigation & Removal

Objective

Rapidly identify, contain, and eradicate malicious code from compromised WordPress sites to restore integrity, secure data, and prevent future infections.

Our Kinetic Approach

Forensic Malware Hunt: Manual code review and log analysis to identify backdoors, malicious scripts, and SEO spam injections hidden in core files, themes, and plugins.

Complete Threat Eradication: Safe removal of all malicious code, compromised files, and unauthorized administrative users from your WordPress installation and database.

Infection Source Analysis: Investigation to determine the initial point of compromise (e.g., vulnerable plugin, weak credentials).

Post-Clean-up Hardening: Implementation of security best practices, including updates and configuration fixes, to prevent recurrence.

Deliverable

A detailed incident report with forensic evidence of the compromise, a list of all actions taken, and a tailored security hardening checklist to protect your restored site.

Our Services

Security Consultation

Objective

Transform cybersecurity from a technical challenge into a strategic business advantage, building a resilient and proactive security posture tailored to your unique goals and risks.

Our Kinetic Approach

Strategic Security Roadmap: Develop a phased, actionable plan aligned with business goals to prioritize security investments and program maturity.

Compliance & Architecture Guidance: Navigate complex regulations (GDPR, SOC 2) and review security architectures for new projects or legacy systems.

Incident Preparedness: Assist in developing and testing incident response plans and playbooks to ensure organizational readiness.

Program Development & Review: Help establish or mature your security policies, standards, and employee awareness training programs.

Deliverable

Clear, executive-friendly recommendations and strategic frameworks that empower you to make informed decisions, justify security spending, and systematically reduce risk across your organization.

Why Choose Us

➡ **Proactive, Offensive Security Experts**

➡ **Business-Focused Risk Intelligence**

➡ **Clear Guidance from Discovery to Remediation**

➡ **A Dedicated, 24/7 Security Partnership**

Choose Cyenetic Solutions Ltd. for a cybersecurity partnership that provides clarity and proactive defence. Our team of offensive security experts employs a kinetic methodology, manually simulating real-world attacks to uncover the critical vulnerabilities that automated tools miss. We translate complex technical findings into business-focused risk intelligence, prioritizing threats based on their actual impact on your operations. You receive more than a report—you get a clear roadmap with expert guidance through remediation, backed by a dedicated team offering 24/7 support to ensure your security posture is resilient and responsive.
