## Experience

### Software Engineer Consultant

*King Faisal Specialist Hospital and Research Centre*

January 2021 – Present

Led and managed a team in developing a cross-platform employee portal app for iOS and Android using React Native and Expo. Oversaw task assignments, conducted code reviews, and ensured adherence to platform best practices and project timelines, maintaining high code quality and performance.

### Software Engineer Consultant

*Nokia Bell Labs (Murray Hill, NJ, USA)*

June 2023 – August 2023

Architected and developed a cross-platform companion app using Kotlin Multi-platform for Android & iOS. Designed an efficient ML model deployment system, scalable data management, and a customizable user experience, ensuring seamless monitoring and historical data tracking.

June 2022 – August 2022

Designed and architected a high-scale simulator for Nokia Environmental Monitoring (NEMo), supporting 100+ autonomous devices. Built with a modular architecture, enabling flexible execution via historical data replay (InfluxDB), live API integration, or synthetic event generation. Optimized for scalability and real-world accuracy.

### Software Engineer Consultant

*Saudi Authority for Intellectual Property*

November 2019 – January 2021

Stabilized and optimized the authority's portal for performance and security. Designed and implemented in-house solutions while providing consultation and support to teams and developers across the organization.

### Software Engineer

*King Faisal Specialist Hospital and Research Centre*

June 2018 – November 2019

Designed and implemented an administration portal for a patient gateway to efficiently manage and process patient requests, including appointment scheduling, patient complaints, and personal information updates, while integrating an Access Control List (ACL), database connections, and email/SMS notifications for automated patient engagement.

November 2013 – August 2017

Developed and maintained applications serving patients, employees, and vendors across multiple platforms, including web applications using JavaServer Faces, console applications in Java, and iOS applications with Objective-C. Ensured scalability, performance, and maintainability to support diverse user needs.

### Software Engineer

*Multimedia Startups (TURBO Studios & RVEALR, New York, NY, USA)*

September 2017 – May 2018

Prototyped a client dashboard with a REST API back-end to enable resource management and monitoring, integrated AWS connections into internal admin tools for cloud-based operations, and improved a Spring Framework back-end system by fixing bugs and enhancing performance.

### Software Engineer Intern

*King Faisal Specialist Hospital and Research Centre*

June 2012 – August 2012

Enhanced the Emergency Management System (EMS) by developing administrative features that enable administrators to configure and set up emergency units, improving system flexibility and operational efficiency.

## Education

### Stevens Institute of Technology

M.S. In Computer Science (2017 – 2018)

### Imam University

B.S. In Computer Science (2008 – 2013)

## Projects

### Various Big Data analytics projects

Developed many MapReduce jobs for massive datasets on HDFS to perform spatial join, detecting outlier based on distance, and performing K-Means clustering. Also developed many Spark workflows to perform indexing of high relative density of grid cells, generating the Frequent Pattern Mining using the Apriori algorithm and producing progressive approximate answers for aggregation queries. In addition to creating a variety of Apache Pig queries and Apache Hive scripts.

### Various full-stack development projects

Developed many full-stack projects for different areas (Healthcare, Education, Social, and others) using multiple technologies for front-end like React, Vue.js, JQuery, and Vanilla JS. And multiple technologies for back-end like Spring Boot, Express.js, and Flask. That interacts with different data sources like SQL, NoSQL, REST API, and GraphQL. And communicate with other services like ActiveMQ Artemis and Keycloak.

## Awards & Achievements

### Winner Best Hack Using a NYC API

*HackNY Hackathon Spring 2017*

Intel, MongoDB, Twilio and others

<https://devpost.com/software/mansplaintome>

### Winner Most Original Project

*DuckHacks Hackathon 2017*

Google and JPMorgan Chase & Co.

<https://devpost.com/software/duckhacks-share-your-taste>

## Certificates

### Advanced Study in Software Construction

*Massachusetts Institute of Technology*

<http://web.mit.edu/6.031/www/1a19/>

### React Nanodegree

*Udacity*

<https://confirm.udacity.com/563VRG2S>

### A developer's guide to the Internet of Things (IoT)

*Coursera (9J6KF7RTGT3H)*

<https://www.coursera.org/account/accomplishments/verify/9J6KF7RTGT3H>

### Red Hat Certified System Administrator

*Red Hat (140-006-149)*

<https://www.redhat.com/rhtapps/certification/verify/?certId=140-006-149>

## Skills

<b>Languages</b>	TypeScript, Java, Python, JavaScript, Objective-C
<b>Frameworks</b>	Expo, Express.js, Spring Boot, Flask
<b>Frontend</b>	React, Vue, HTML5, CSS3
<b>Infrastructure</b>	SQL, NoSQL, Node.js, RabbitMQ, GraphQL, InfluxDB, etcd, Redis, Hadoop, Spark, Pig, Hive
<b>CI / CD</b>	Git, Jenkins, Docker
<b>Cloud</b>	AWS
