

Plugin Overview

SphereManager is a plugin for sharing spherical panorama images (captured by cameras such as RICOH THETA) on the web. You can customize a player by putting texts and icons directly on top of your image (example shown below.) Simply paste the short code into your website and the visitor will be able to maneuver through the image as they like.

Difference between and pro version

Up to 3 scenes can be created with the free version. Please purchase the pro version to create unlimited amount of scenes. <https://www.micro-wave.net/ext/plugins/>

About the controller

- Click on the controller at the bottom left corner to maneuver through the image.
- You can also click and drag to get the same effect.
- For full-screen mode, click the icon on the bottom right corner. Hit escape to exit.
- You'll also be able to jump to other scenes by clicking labels you specified.
- Function restriction of each OS

- Cannot use full screen function on iOS
- Cannot play background video on mobile devices(iOS/Android). However, show the first flame image of a video.

Plugin

- Placable Labels: text, images, HTML code
- To be able to import images and movies, you first need to upload them to Media Library on WordPress. (you could also paste URLs) The plugin will recognize your sources once you upload them to Media Library.
- Do not import a movie file as is.
- Before using the plugin, convert the imported movie files to expanded 2 dimensional format. Contact the manufacturer of your capturing device for the conversion process.
- cf. For RICOH THETA, there is an app where it converts your source to the suitable format. Click the following link to download the app. <https://theta360.com/ja/support/download/>

System requirements

- Applicable browser
 - Google Chrome (latest version)
 - Firefox (latest version)
 - Safari (latest version)
 - Microsoft Edge (latest version)
- Non-applicable browser

Creating Scenes

※ Only administrator can see the menu.

- You will see SphereManager in your WordPress menu after you install it.
- You will see the list of scenes and edit view when you open it.
- The editing tool lets you name the scene, put description, and change the background image/video.
- On "Label," you can create labels with texts, images, and HTML codes.
- With the "transfer" tool, you can link a scene to a label to be able to make the viewer jump to a certain scene. (The tool for only text and image)
- You can click where you want the label to be on edit preview to place a label.
- You can drag the label on the scene to move it around. Click on the delete button(x) on label list to delete it.
- Hit save and the scene is added to the list on the right.
- Simply paste the short code to your website and the visitor will be able to maneuver through the image as they like.
